ADVERTENCIA
La exposición de los ojos de la seguridad puede causar daños severos o la muerte. No fumar, ni comer ni beber durante el mantenimiento de este equipo.

A Solid Foundation for You and Your Customers

The new GenPad™ series from DiversiTech® is the answer for dealers who need a professional looking pad that will provide a lifetime base for their Generac® home backup Generator installations.

Each GenPad is made from a composite of high strength fibers and cement and is warranted for the life of the generator. These pads provide a sturdy, permanent base for the generator that won't shift or degrade over time. Give your customers even more peace of mind with their generator purchase when you add the reliable GenPad.

GenPads are much lighter weight than a poured concrete pad and take less time and effort to install. GenPads are made specifically to fit Generac 8-22kw home standby units. GenPads were designed to meet the engineering specifications of Generac units. Generac makes GenPads available to all of their dealers and distribution partners. The pads include these features:

- **Extremely Impact and Breakage Resistant**
- **Fiber reinforced concrete that is further reinforced with rebar**
- **Flat bottom to facilitate easy leveling of the pad and generator**
- **Virtually eliminates sinking of the unit into the ground**
- **Easy to install**
- **½ the weight of poured concrete**
- **Meets national fire code NFPA 37**

Two models to meet any need

GenPad
Designed for residential installation.

**Patents Pending*

GenPad Hurricane
Thicker, heavier 4" pad designed to meet wind load requirements in hurricane prone areas.

GenPad Program Enhancement

Available to sales dealers, service dealers and distributors in pallets of 2, 5 or 10 - volume discounts available (see table below)

GenPads are the answer for installers who want a professional-looking pad that provides a lifetime base for Generac air-cooled home standby generators.

- Pallets of ten pads can be mixed with both sizes (ex: quantity 8 0J5339 and quantity 2 0J5340 to make up one pallet of ten).

FAQ:

Q: How do I order these pads?

A: GenPads are available exclusively through Generac. Service dealers can order through GENservice by looking in Parts / Documents / Service Documents. **Sales dealers and distributors can order by e-mailing aftersales@generac.com or by fax at 262.472.6515.**

Q: Is the GenPad approved by Generac for use with its generators?

A: The GenPad is not only approved by Generac, but is only available for purchase from Generac!

Q: Why would I want to install a GenPad under a Generac Guardian Series unit?

A: The GenPad provides a solid, sturdy foundation for the Generac Guardian Series generator and eliminates the risk of uneven mounting surfaces. Many local area codes may also require a concrete base for the generator. The GenPad also provides extra height off of the ground for the generator.

Q: Can I install the Guardian Series on the GenPad without removing the black composite mounting pad?

A: Yes, by leaving the black composite mounting pad attached to the generator with the back two bolts and by removing the front two bolts. Place the generator, with the black composite mounting pad in place, on top of the already placed and leveled GenPad. Align the bolt holes of the Generac Guardian Series generator with the inserts in the GenPad and attach together by using 3" long 3/8" bolts. Installing with the black composite pad between the generator and GenPad also elevates the generator so that the plastic fascia (standard with 22kw and available in kits for other sizes) can be used.

Q: What do I need to put underneath the GenPad?

A: The GenPad can be placed directly onto leveled ground. There is no need to place anything below it to provide a stable platform with professional appearance.

Q: Why would installers want to use GenPads?

A: The GenPad provides a sturdy base for the Generac generator. It helps to protect it and keep it level to maximize its performance and life. The GenPad is faster and easier to use for installations than pouring a pad, eliminates the need for homeowners to pay to have the pad re-leveled in the future, and provides greater value with installations than are available using other methods.

Other info:

Warranted for the life of the generator (through DiversiTech). 25% recycled material. Rebar reinforced.
