FIRESEAL 814

Intumescent Firestop Sealant

FEATURES
· Fire Rated
· Excellent Adhesion
· Flexible Set
· Water Based (Acrylic)
· 0 Slump (ASTM D2202)

Fireseal 814 is an ASTM E814 rated one part water based acrylic intumescent sealant formulated to seal gaps in construction and through-penetrations against the passage of fire, smoke and gasses.

PRODUCT CODE   COLOR   SIZE       TEXTURE   PACKAGING                                      PALLET WEIGHT
FS814-T         Rust Red  10.3 oz Tube Smooth 12 - Tubes Per Case / 45 Cases Per Pallet / 540 Tubes  750 lbs

APPLICATION
Fireseal 814 is suitable for use around copper and steel pipes, steel conduits, electrical cables, data and telephone cables, PVC and CPVC pipes (up to 2” diameter), and HVAC ductwork.

TESTING & PERFORMANCE DATA
Tested in Accordance with ASTM E-84, UL 1479
UL Classified 1 and 2 hour Rating
Please visit the UL website for details on our current system

ADDITIONAL INFORMATION
 Classified fill, void or cavity material through-penetration firestop system numbers

FIRESEAL 814™

INTUMESCENT
FIRESTOP SEALANT

DESCRIPTION
FIRESEAL 814™ is an ASTM E-814 rated one part water based acrylic intumescent sealant formulated to seal gaps in construction and through penetrations against the passage of fire, smoke and gasses.

RECOMMENDED USES
FIRESEAL 814™ has been tested where services penetrate through concrete walls, floors, and drywall construction, and is suitable for use around copper and steel pipes, steel conduits, electrical cables, data and telephone cables, PVC, CPVC pipes, and HVAC ducts.

APPLICATION INSTRUCTIONS
1. Areas to be sealed must be dry, clean and free from oil, grease and foreign matter.
2. Verify that any annular space between the through-penetration and the opening is within the limits defined by the tested constructions.
3. When mineral wool is required, cut oversize and pack tightly into space between the opening and the service, ensuring that the forming is positioned to allow for correct depth of FIRESEAL 814™ sealant (contingent upon system design).
4. Apply FIRESEAL 814™ using a conventional caulking gun, pneumatic gun, putty knife or trowel.
5. When desired depth of FIRESEAL 814™ sealant has been achieved, smooth surface with damp knife or spatula.

SPECIFICATION APPROVALS
Tested in accordance with ASTM E-814, UL 1479. UL Classified 1 and 2 Hour Rating.

SAFETY PRECAUTIONS
Consult Manufacturer’s Material Safety Data Sheet.

FIRST AID:
For skin contact - wash skin thoroughly with soap and water.
For eye contact - irrigate with clean fresh water for at least 10 minutes holding eyelids apart, and seek medical advice;
If swallowed - wash mouth with water and give water to drink. Do not induce vomiting.
KEEP OUT OF REACH OF CHILDREN.

CLEAN UP
Use warm soapy water (when wet).

Polymer Adhesives Sealant Systems, Inc., is proud to be affiliated with the following organizations:

ENGINEERING CONTROLS (SPECIFY, E.G., VENTILATION, ENCLOSED PROCESS)

Use in ventilated area

LEAK OR SPILL PROCEDURE

Clean area and dispose of the material in accordance with local regulations

WASTE DISPOSAL

Product is considered to be an "article" as defined in the federal OSHA Hazard Communication Standard

HANDLING PROCEDURES AND EQUIPMENT

Avoid contact with strong acids or alkaline materials

STORAGE REQUIREMENTS

Store between 5 C and 25 C in a dry ventilated area away from heat sources. Protect from Frost. Store separately from oxidizing and strongly alkaline and strong acidic materials to prevent possible exothermic reaction

Not regulated by DOT, IATA or IMDG [air or shipping] regulations

SECTION VIII - FIRST AID MEASURES

SPECIFIC MEASURES

Eye Contact: Wear eye protection if material gets in eyes rinse with saline solution for 15 minutes seek medical help if required.

Skin Contact: Wear gloves if skin becomes contaminated washing with soap and water

Inhalation: Use material in ventilated area, generally no respiratory protection is required

Ingestion: If accidentally swallowed wash mouth with water and give water to drink. Do not induce vomiting.

Design/System/Construction/Assembly Usage Disclaimer

- Authorities Having Jurisdiction should be consulted in all cases as to the particular requirements covering the installation and use of UL Certified products, equipment, system, devices, and materials.
- Authorities Having Jurisdiction should be consulted before construction.
- Fire resistance assemblies and products are developed by the design submitter and have been investigated by UL for compliance with applicable requirements. The published information cannot always address every construction nuance encountered in the field.
- When field issues arise, it is recommended the first contact for assistance be the technical service staff provided by the product manufacturer noted for the design. Users of fire resistance assemblies are advised to consult the general Guide Information for each product category and each group of assemblies. The Guide Information includes specifics concerning alternate materials and alternate methods of construction.
- Only products which bear UL's Mark are considered Certified.

Through-penetration Firestop Systems

See General Information for Through-penetration Firestop Systems

System No. W-J-1188

June 01, 2005

F Ratings — 1 and 2 Hr (See Item 1)

T Rating — 0 Hr

1. Wall Assembly — Min 4-7/8 or 6-1/8 in. (124 or 156 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) concrete for 1 and 2 hr rated assemblies, respectively. Wall may also be constructed of any UL Classified Concrete Blocks*. Max diam of opening is 3 in. (76 mm).

See Concrete Blocks (CAZT) category in the UL Fire Resistance Directory for names of manufacturers.

http://database.ul.com/cgi-bin/XYV/template/LISEXT/1FRAME/showpage.html?name=...  11/13/2013
The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrating Product** - Flexible Metal Piping — One nominal 1-1/4 in. (32 mm) diam (or smaller) steel flexible metal piping to be installed either concentrically or eccentrically within the firestop system. The annular space shall be min 11/16 in. (18 mm) to max 1-1/16 in. (27 mm). Piping to be rigidly supported on both sides of wall assembly.

**OMEGA FLEX INC**

3. **Firestop System** — The firestop system shall consist of the following:

   A. **Packing Material** — Min 3-7/8 or 5-1/8 in. (99 or 130 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form for 1 or 2 hr fire rated walls, respectively. Packing material to be recessed from both surfaces of wall as required to accommodate the required thickness of fill material.

   B. **Fill, Void or Cavity Material** - Caulk — Min 1/2 in. (13 mm) thickness of fill material applied within the annulus, flush with both surfaces of wall.

**POLYMER ADHESIVES SEALANT SYSTEMS INC** — FireSeal 814

3. **Fill, Void or Cavity Material* - Caulk** — Min 5/8 in. (16 mm) thickness of fill material applied within the annulus, flush with both surfaces of wall.

   **POLYMER ADHESIVES SEALANT SYSTEMS INC** — FireSeal 814

4. **Steel Retaining Angles** — Min 2 by 2 by 0.030 in. (51 by 51 by 0.76 mm) steel angles attached to all four sides of duct on both sides of wall. The angles shall be attached to the duct with min 1/8 in. (3 mm) diam steel rivets or No. 8 (or larger) sheet metal screws spaced max 2 in. (51 mm) from each end of duct and spaced a max of 5 in. (127 mm) OC.

![Diagram of Through-penetration Firestop System]

Section A-A
1. **Wall Assembly** — The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300, U400 or V400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Studs** — Wall framing shall consist of either wood or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC. Steel studs to be min 3-5/8 in. (92 mm) wide and spaced max 24 in. (610 mm) OC.

   B. **Gypsum Board** — Min 5/8 in. (16 mm) thick, 4 ft (1.22 mm) wide with square or tapered edges. The gypsum board type, thickness, number of layers and orientation shall be as specified in the individual U300, U400 or V400 Series Wall and Partition Design. Max diam of opening is 3 in. (76 mm).

   The hourly F Ratings of the firestop system are equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Metallic Sleeve** — Cylindrical sleeve fabricated from nom 0.025 in. (0.64 mm) thick (or lighter) galv sheet steel and having a min 1 in. (25 mm) lap along the longitudinal seam. Length of steel sleeve to be equal to the thickness of the wall plus 2 in. (51 mm), such that when installed, the ends of the steel sleeve extend 1 in. (25 mm) beyond each surface of the wall. Sleeve installed by coiling the sheet steel to a diam smaller than the through opening, inserting the coil through the opening and releasing the coil to let it uncoil against the circular cutouts in the gypsum board layers.

3. **Through Penetrating Product** — One nom 1-1/4 in. (32 mm) diam (or smaller) steel flexible metal piping to be installed either concentrically or eccentrically within the firestop system. The annular space shall be min 11/16 in. (18 mm) to max 1-1/16 in. (27 mm). Piping to be rigidly supported on both sides of wall assembly.

**OMEGA FLEX INC**

4. **Firestop System** — The firestop system shall consist of the following:

   A. **Packing Material** — Min 3-7/8 or 5-1/8 in. (98 or 130 mm) thickness of min 4 pcf (64 kg/m³) mineral wool batt insulation firmly packed into opening as a permanent form for 1 or 2 hr rated walls, respectively. Packing material to be recessed from both surfaces of wall as required to accommodate the required thickness of fill material.

   B. **Fill, Void or Cavity Material** — Min 1/2 in. (13 mm) thickness of fill material applied within the annulus, flush with both surfaces of wall.

**POLYMER ADHESIVES SEALANT SYSTEMS INC** — FireSeal 814
